DETAILED ACTION***Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-20 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-29 of U.S. Patent No. 6,611,249.

Current Application recites at least one limitation "the graphics controller operable to adjust the gamma value without substantially affecting a grayscale resolution of the liquid crystal display screen"; whereas the conflicting U.S. Patent No. 6,611,249 recites at least one limitation "wherein grayscale resolution of said liquid crystal display screen is substantially unaffected by adjustment of said net color temperature". Although the conflicting claims are not identical, they are not patentably distinct from each other because it would have been obvious to a person of ordinary skill in the art at the time

Art Unit: 2674

the invention was made to recognize that the scope of the claimed invention in current Application are broader than the scope of the claimed invention in U.S. Patent No. 6,611,249.

3. Claims 1-20 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-22 of U.S. Patent No. 6,359,389.

Current application recites at least one limitation "the graphics controller operable to adjust the gamma value without substantially affecting a grayscale resolution of the liquid crystal display screen"; whereas the conflicting U.S. Patent No. 6,359,389 recites at least one limitation "said adjustment circuit operable to alter the gamma profile of said flat panel display without degrading its gray scale resolution". Although the conflicting claims are not identical, they are not patentably distinct from each other because/ it would have been obvious to a person of ordinary skill in the art at the time the invention was made to recognize that the at least claim 1 in current application is broader than the at least patentable claim 1 in U.S. Patent No. 6,359,389.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
